---

## Professional Summary

Site Reliability Engineer with 5+ years of experience maintaining production systems across cloud and on-prem environments. Focused on improving system reliability, deployment consistency, and infrastructure governance through CI/CD optimization and Infrastructure-as-Code practices. Strong interest in observability, scalability, and secure infrastructure design.

## Work Experience

**Site Reliability Engineer**, Concord System Management Corporation (Nov 2025 - Present)

- Audited existing cloud infrastructure and gradually transitioned unmanaged resources into Infrastructure-as-Code using Terraform and Kustomize to improve consistency and governance.
- Designed and implemented reusable IaC configurations capable of provisioning new environments from scratch, reducing setup time and operational overhead for future projects.
- Reviewed Google Cloud resource utilization and analyzed cost structure; proposed and executed Committed Use Discount (CUD) purchasing strategy to optimize cloud spending.
- Assisted in building and debugging Jenkins deployment pipelines to improve deployment stability and reduce operational friction.

**Site Reliability Engineer**, 25sprout LLC (June 2019 - Feb 2025)

- Maintained and improved reliability of SurveyCake and client production systems across multi-environment infrastructures.
- Optimized CI/CD pipelines, reducing average deployment time by ~80%.
- Designed reusable GitLab CI templates to standardize deployment workflows and improve consistency.
- Built and maintained infrastructure across on-prem, VPS, and public cloud platforms.
- Led production infrastructure migration during system upgrade, ensuring service continuity.
- Implemented pre-rendering service for SPA frontend to improve SEO and crawler compatibility.
- Authored load testing with Apache JMeter to validate system capacity and performance baselines.
- Introduced HashiCorp Vault to centralize and strengthen secrets management.
- Monitored system health using Grafana and CloudWatch to proactively identify performance issues and resolve incidents.

**Linux Server Assistant Engineer**, TS CLOUD PTE. LTD. (November 2018 - May 2019)

- Maintained GCP-hosted websites and built internal automation tools with Google Apps Script.

## Education

National Central University; Zhongli, Taiwan - Bachelor of Mechanical Engineering (2017)
TOEIC: 970/990

## Skills

- Cloud Platforms: AWS, GCP
- Infrastructure as Code: Terraform, CloudFormation
- Container & Orchestration: Docker, Kubernetes
- CI/CD: GitLab CI, Jenkins
- Monitoring & Observability: Grafana, CloudWatch
- Programming: Go, Shell, Python, C
- Databases: MySQL, PostgreSQL

## Side Projects

- Designed a GCP/GKE GitOps platform with Terraform, Kustomize, and GitHub Actions. Supporting isolated dev, staging, and production environments, secure OIDC-based CI/CD, automated container builds, Gateway API exposure, and PR-driven Kubernetes deployments. ↗
